1. Executive Summary & Proof-Driven Assessment Overview

This assessment was executed by TrePath 2.6 Autonomous Attack-Path Validation, Target Intelligence & RTEX Assurance Engine against 46 submitted target(s) reconciled to 14 authorized in-scope origin asset(s) (owasp.org (+13 authorized origins across 14 in-scope assets)) under the 'authorized_pentest' Rules of Engagement. TrePath 2.6 Autonomous Attack-Path Validation, Target Intelligence & RTEX Assurance Engine enforces immutable 9-field asset provenance, per-origin written authorization governance, effective HTTP header-policy evaluation, 4-track score separation, pre-execution sensor readiness gating, 5-stage attack-path progression, and verifiable RFC 8032 Ed25519 cryptographic signing.

1.0A Executive Priority Risk & 3-Pillar Score Attribution (Demonstrated Compromise vs. Control Hygiene)

2. Assessment Scope, 7-Stage Asset Reconciliation Funnel & RoE Policy Engine

2.0 Seven-Stage Scope & Asset Reconciliation Funnel (TP25-02)

Funnel Stage	Count	Scope Provenance & Reconciliation Rationale
1. Requested Targets	46	46 target URL(s)/IP(s) submitted to the TrePath assessment specification.
2. ROE Authorized Targets	46	46/46 submitted target(s) matched approved RulesOfEngagement allowlist rules.
3. Resolved Unique Hostnames	14	14 unique lowercased hostname(s)/IP(s) after collapsing multi-path repository/app URLs sharing a host.
4. In-Scope Origin Assets	14	14 persisted Asset record(s) (one canonical Asset per unique scheme://host:port effective_origin).
5. Out-of-Scope External Refs	0	0 out-of-scope origins probed; external HTML/JS links isolated as EXTERNAL_REFERENCE_NOT_SCANNED.
6. Redirected Destinations	0	All HTTP 301/302/307/308 hops recorded in provenance.redirect_chain; cross-origin redirects blocked.
7. Discovered HTTP Endpoints	376	376 deduplicated canonical HTTP endpoints discovered across the 14 in-scope origin asset(s).

2.0A Target-Resolution Intelligence Layer (Repository & Documentation vs. Deployed Application)

Scanning a GitHub repository webpage (REPOSITORY_URL) or an OWASP project documentation page (DOCUMENTATION_PAGE) is explicitly distinguished from scanning a deployed application instance (DEPLOYED_APPLICATION). Multiple repository URLs on github.com are collapsed to 1 source-code hosting reference and are NOT counted as separate deployed application assessments.

Submitted URL	Target Type	Resolved Effective Origin	Deployed App Instance?	Resolution Rationale

2.0B Four-State Port & Application Transport Discovery Reconciliation

Discovery Layer	Reconciled State	Count / Scope	Technical Explanation
1. Raw TCP Port Scan	SKIPPED_BY_WEB_ONLY_PROFILE	0 Raw TCP Ports	Raw infrastructure TCP SYN/connect port scanning reported 0 open non-web infrastructure ports (skipped/filtered by edge CDN/WAF boundaries on multi-URL web scope), whereas HTTP/HTTPS application-layer probes verified active TCP/TLS transport on port(s) 443 across 14 in-scope origin(s) and 376 discovered HTTP endpoints. Zero raw Nmap ports must never be interpreted as zero exposed HTTP services.
2. Filtered TCP Ports	PORT_FILTERED	0	Ports where SYN probes received no SYN/ACK or ICMP unreachable due to CDN/edge firewall policy.
3. Closed TCP Ports	PORT_CLOSED	0	Ports responding with TCP RST.

Discovery Layer	Reconciled State	Count / Scope	Technical Explanation
4. HTTP/TLS App Transport	HTTP_HTTPS_TRANSPORT_REACHABLE	376 Endpoints (14 Origins)	Application-layer HTTP/1.1 & HTTP/2 over TCP 443 verified across 14 origin(s).

4. Evidence-Backed Attack Graph, Edge Provenance & Choke-Point Analysis

TrePath 2.6 Autonomous Attack-Path Validation, Target Intelligence & RTEX Assurance Engine AttackGraph 2.6 (Causal Edge & Continuous Diff) requires every attack-path edge to declare an explicit causal state transition (OBSERVED, PRECONDITION_CONFIRMED, TECHNIQUE_VALIDATED, or INFERRED), excludes compliant observations (such as TLS-COMPLIANT-001), and never chains unrelated passive observations into a fake multi-step attack chain.

4.0 Five-Stage Attack-Path Evidence Progression Matrix (OBSERVED -> PRECONDITION -> TECHNIQUE_VALIDATED)

Stage	Attack-Chain Stage	Canonical Edge State	Progression Status	Evidentiary Summary
S-1	Initial Exposure	OBSERVED	DEMONSTRATED	Application endpoint, HTTP service, or surface weakness directly observed in scope.
S-2	Precondition Validation	PRECONDITION_CONFIRMED	DEMONSTRATED	Required authentication gate, technology version, or missing security control confirmed.
S-3	Controlled Exploitation	INFERRED	REQUIRES_VALIDATION	Safe, non-destructive PoC adapter reproduces deterministic security behavior.
S-4	Privilege Boundary Assessment	INFERRED	REQUIRES_VALIDATION	Verifies whether obtained session or token crosses an authentication/authorization privilege boundary.
S-5	Impact Assessment	INFERRED	REQUIRES_VALIDATION	Documents demonstrated unauthorized access/data impact with sealed EvidenceCore transcripts (RTEX retests: 0).

5. Stage 9 (9.1 - 9.7) Exploitation Validation & Post-Exploitation Matrix

Following Scan #35 & #39 Engineering Directives, Stage 9 separates discovered topology and correlated observations from proven exploitation transitions, validates access boundaries across anonymous and authenticated principals, and verifies that post-exploitation proof states are only reported when backed by live EvidenceCore artifacts.

5.1 Stage 9.3 & 9.4 Access Boundary & Post-Exploitation Verification Table

Target Surface	Principal Tested	Verified Boundary State	Proven Capability	Explicitly Unproven Boundary	Artifact & Full SHA-256
phpMyAdmin Web Interface (/phpMyAdmin/)	Unauthenticated HTTP Client	LOGIN_GATE_ENFORCED (Control Gap: Admin Login Exposed on Network)	HTTP 200 login page reachable over cleartext HTTP	Database administrative login and SQL table access are blocked by authentication gate (not proven)	#1546 (eae3fb111919ae686dfc971a99d66d5ccb3b3f989622e4e7c019ead360d36a08)

5.2 Stage 9.5 Lateral Movement Validation & Stage 9.6 CIA Impact Assessment

Stage / Dimension	Validation Status	Demonstrated Evidence & Scope Boundary
Stage 9.5 Lateral Movement	NOT_APPLICABLE (Zero Pivot / SMB Services Exposed on Scope)	No SMB, RPC, or authenticated pivot services were exposed on the in-scope web/API target(s); lateral movement probes were NOT_APPLICABLE.
Stage 9.6 Confidentiality	CONTROL_GAP_OBSERVED (No Unauthorized Data Exfiltration Proven)	HTTP response headers, public route metadata, and service banners observed within read-only ROE boundaries; zero private records or credentials disclosed.
Stage 9.6 Integrity	NO_INTEGRITY_VIOLATION_PROVEN (Read-Only Assessment)	Zero administrative sessions or writable shares verified in this scan; zero bytes modified on target(s).
Stage 9.6 Availability	NOT_TESTED (Out of Scope per Non-Destructive ROE)	Zero service disruption; all probes completed within deterministic rate limits.

5B. Exploit Validation Engine (EVE) - Controlled Exploitation Lifecycle & Decisions

TrePath 2.3 Exploit Validation Engine (EVE) bridges vulnerability discovery and remediation by evaluating preconditions, enforcing operator HMAC approval, executing deterministic read-only validation adapters (EVE-AUTH-001, EVE-AUTHZ-001, EVE-INJ-001, EVE-FILE-001, EVE-NET-001), and distinguishing Vulnerability Detected, Exploitability Validated, Impact Verified, and Remediation Verified.

4-Tier Platform Distinction	Canonical Tier Code	Validated Job Count	Evidentiary Standard
1. Vulnerability Detected	VULNERABILITY_DETECTED	125 (73 Obs / 52 Exploit Jobs)	Scanner or passive control observation confirmed in scope; separated from exploitability validation jobs.
2. Exploitability Validated	EXPLOITABILITY_VALIDATED	0	Preconditions satisfied and deterministic test reproduced behavior.

4-Tier Platform Distinction	Canonical Tier Code	Validated Job Count	Evidentiary Standard
3. Impact Verified	**IMPACT_VERIFIED**	0	Controlled test established unauthorized access, privilege escalation, or data exposure.
4. Remediation Verified	REMEDIATION_VERIFIED	0	Subsequent RTEX retest proved the security boundary now holds.
Non-Exploited Breakdown	4-STATE_OUTCOME_MODEL	NA:2 | ROE:26	EXPLOITATION_FAILED: 0 (finding preserved) | EXECUTION_ERROR: 0

8.1A Seven-Step Remediation & Retest Verification Loop (RTEX Lifecycle)

Step	RTEX Lifecycle Stage	Current Status	Verification & EvidenceCore Protocol
Step 1	Baseline Finding Sealed (T0)	COMPLETED	17 consolidated findings sealed with 9-field provenance & 64-hex SHA-256.
Step 2	Remediation Assigned (REM-xxxxx)	COMPLETED	67 origin-bound RemediationTask work packages generated.
Step 3	Deterministic Retest Executed	STANDBY_AWAITING_FIX	0 live retest execution(s) recorded via POST /api/v1/findings/{id}/retest/execute.
Step 4	Negative-Control Validation	READY	Verifies response is not a generic WAF block, anti-bot challenge, or out-of-scope redirect.
Step 5	EvidenceCore Retest Sealing	READY	Before/after HTTP or TCP transcript sealed with fresh FIPS 180-4 SHA-256 digest.
Step 6	Closure Decision (REMEDIATION_VERIFIED)	PENDING_CLOSURE	Promotes Finding to REMEDIATION_VERIFIED only when deterministic control check passes.
Step 7	T1 Post-Retest Risk Recalculation	HYPOTHETICAL_FORECAST_ONLY	Recalculates live T1 risk index; until retest executes, 2.1/10 remains labeled HYPOTHETICAL_PROJECTION.

RTEX-STANDBY	All Open Findings	AWAITING_PATCH	PENDING_RETEST	EvidenceCore Ready	Use POST /api/v1/findings/{id}/retest/execute after applying remediation to record cryptographic closure proof.

Stage	Engine Module (Version)	Execution Outcome
Stage 1-2	Scope & WebPulse 2.6 + TargetIntel 2.6	Verified 14 in-scope asset(s) (owasp.org (+13 authorized origins across 14 in-scope assets)), 0 open TCP ports, and 376 HTTP endpoints.

Stage	Engine Module (Version)	Execution Outcome
Stage 3	ENUMCORE 2.6	Mapped CPEs and separated precondition-verified KEVs from banner-only candidates.
Stage 4-5	HeaderPolicyEvaluator 2.6 (Context & CSP Report-Only) & EVE 2.6	Enforced RoE scope lock & read-only HTTP DAST checks (0 destructive or out-of-scope PoCs executed).
Stage 6-7	Expedite Strike 2.6 & AttackGraph 2.6 (Causal Edge & Continuous Diff)	Assigned 4-level admin boundary taxonomy and built per-edge evidence-backed attack chains.
Stage 8-9	RiskEngine 2.6, RTEX 2.6 & Noctis 2.6	Computed 7-dimension risk (T0=3.9/10, T1=3.9/10) and signed RFC 8032 Ed25519 manifest.
